

OFFICE OF THE REGISTRAR

Academic Policy Handbook

2027-28

Regulations, student procedures and administrative guidance

Edition	2027.1
Effective date	1 August 2027
Applies to	Taught undergraduate programmes
Approval	Academic Council AC/2027/04 (simulated)

Alderbridge University is fictional. This complete, text-based handbook is prepared for manual software testing and is not an official policy of any real institution.

Contents

Section starts and appendix pages. Printed numbers match the physical PDF pages.

01 Academic regulations	5
02 Course registration	8
03 Attendance	11
04 Add, drop and withdrawal	14
05 Internal assessment	17
06 Grading	20
07 End-semester examinations	23
08 Medical condonation	26
09 Supplementary examinations	29
10 Academic integrity	32

Contents / continued

Section starts and appendix pages. Printed numbers match the physical PDF pages.

11 Projects and dissertations	35
12 Internships and placements	38
13 Library and learning resources	41
14 Hostel and residential rules	44
15 Student leave and interruption	47
16 Scholarships and financial support	50
17 Student records	53
18 Appeals and complaints	56
19 Discipline and community conduct	59
20 Emergency procedures and amendments	62
A Definitions and decision language	65
B Semester process map	66
C Request and decision record	67
D Assessment incident report	68
E Confidential evidence handling	69
F Administrative boundary examples	70
G Finding the responsible office	71
H Edition register and citation practice	72

Using this handbook

Read the operative rule together with its procedure and any express exception. Worked examples explain administration; they do not create a new entitlement. Sections cover distinct decisions, so permission under one process must not be silently treated as approval under another.

Rule	The first paragraph of each numbered subsection states the governing requirement and its scope.
Procedure	The next paragraph explains who acts, what is checked and how the result is recorded.
Worked example	The final paragraph applies the rule to a specific administrative problem.
Definitions	Appendix A explains recurring terms; Appendix F distinguishes easily confused decisions.

The Registrar controls this edition. Students should use the published calendar for dates and the service directory for current contacts. Where programme-specific rules apply, staff should identify the approved specification and cohort rather than relying on an informal departmental practice.

Evidence reference: record the edition, numbered subsection and printed page. All pages, including front matter, carry extractable text and use the same physical page sequence.

SECTION 01 / ACADEMIC REGULATIONS

1.1 Scope and academic authority

1.1.1 Governing provision

These regulations govern taught undergraduate programmes at Alderbridge University. Programme specifications set subject requirements, but cannot reduce a university-wide safeguard. A professional accreditation requirement applies only where the approved programme specification identifies it. Research degrees and short non-credit courses follow separate regulations.

1.1.2 Administrative procedure

The Registrar maintains the approved programme specification and a dated register of variations. Before advising a student, staff identify the admission cohort, programme and applicable edition. An unpublished departmental practice is not an approved variation.

1.1.3 Worked example

A laboratory programme requires an additional safety induction. The induction supplements the degree regulations; it cannot be used to alter a published examination entitlement without an approved rule.

SECTION 01 / ACADEMIC REGULATIONS

1.2 Credits, progression and workload

1.2.1 Governing provision

One credit represents an approved unit of learning workload, including guided study, independent work and assessment. Credit is awarded only when the course outcomes are met. Attendance at a course alone does not confer credit. A transferred course cannot be counted twice toward the same award.

1.2.2 Administrative procedure

The programme board publishes a semester credit map before registration. Advisors check prerequisites, timetable feasibility and any outstanding progression decision. Where a student follows an adjusted study plan, the approved plan identifies the courses deferred and the next progression review.

1.2.3 Worked example

A student transfers a statistics course and later takes an equivalent local course. The transcript may show both learning experiences, but the degree audit counts credit from only one.

SECTION 01 / ACADEMIC REGULATIONS

1.3 Interpretation and approved departures

1.3.1 Governing provision

A mandatory rule uses must or shall. A discretionary provision uses may and identifies the decision-maker. Permission for one student does not create an automatic entitlement for another. No officer may waive a condition outside the authority delegated to that office.

1.3.2 Administrative procedure

Where two provisions appear inconsistent, the advisor records both references and seeks a written interpretation from the Registrar. The Academic Council resolves substantive conflicts. Until resolved, staff avoid an irreversible decision that would remove a student opportunity merely because wording is ambiguous.

1.3.3 Worked example

Two course handbooks describe different progression dates. The advisor refers the discrepancy for resolution and records interim registration arrangements; the student is not asked to choose which document to follow.

SECTION 02 / COURSE REGISTRATION

2.1 Eligibility and registration checks

2.1.1 Governing provision

Registration establishes the courses in which a student is enrolled for the semester. Students must satisfy published prerequisites or obtain an approved prerequisite substitution before registration is final. An advisor recommendation is not, by itself, permission to enter a restricted course.

2.1.2 Administrative procedure

The student reviews the offered courses, meets the advisor and submits a proposed study plan. The department checks prerequisites and seat limits; the registry confirms the final record. A confirmation notice lists course codes and credits so that errors can be challenged before teaching progresses.

2.1.3 Worked example

A student selects Advanced Structures before the prerequisite result is released. The department may hold a provisional place, but the confirmation must state what result or formal substitution is needed.

SECTION 02 / COURSE REGISTRATION

2.2 Holds, capacity and late registration

2.2.1 Governing provision

A registration hold must identify its reason, the office responsible and a route for review. Holds related to missing documents are distinct from academic ineligibility. Course capacity is allocated using published priorities, not informal promises made before the registration window.

2.2.2 Administrative procedure

The registry publishes opening and closing dates in the academic calendar. A late applicant explains the delay and obtains confirmation that missed teaching can be recovered. The decision records any practical or safety limitation that prevents late entry. A payment query is referred to the finance office rather than resolved by a tutor.

2.2.3 Worked example

A timetable clash becomes apparent after an approved course fills. The advisor documents an alternative that preserves progression; a seat is not created by removing a previously confirmed student without review.

SECTION 02 / COURSE REGISTRATION

2.3 Registration reconciliation

2.3.1 Governing provision

Students and departments share responsibility for reconciling enrolment records. Participation in an online classroom does not prove formal registration, and a missing online invitation does not cancel a confirmed course. Examination lists must derive from the reconciled registry record.

2.3.2 Administrative procedure

During the published reconciliation period, students compare their registration notice with class and assessment lists. Departments resolve discrepancies with supporting enrolment evidence. Corrections preserve a history of the original entry, the revised entry and the authorising officer. In this edition, the registry sends a reconciliation notice within five working days after a complete discrepancy report is received.

2.3.3 Worked example

A registered student is absent from the laboratory register because a course code changed. The registry links the replacement code to the original approval; it does not create a second credit-bearing enrolment.

SECTION 03 / ATTENDANCE

3.1 Ordinary attendance requirement

3.1.1 Governing provision

The minimum attendance requirement is 85% in each course. Attendance is calculated separately for each registered course using eligible sessions actually delivered. Cancelled sessions are excluded. Attendance in another course cannot compensate for a shortage. This revised threshold applies to the incoming 2027 cohort; continuing students follow the transition rule in section 20.3.

3.1.2 Administrative procedure

Course coordinators publish the recording method and notify students when their running record indicates a risk of shortage. The student receives the session-level calculation before the eligibility list is finalised. Essential practical competencies remain separate requirements.

3.1.3 Worked example

A course delivers 40 eligible sessions and a student attends 34. The student meets the revised ordinary requirement. Attending 33 sessions does not meet it; staff must consider the applicable condonation route rather than round the percentage upward.

SECTION 03 / ATTENDANCE

3.2 Attendance corrections and evidence

3.2.1 Governing provision

An attendance record may be corrected when reliable evidence shows an error. A student assertion alone is insufficient, but the absence of a card-swipe record does not settle the matter if the approved recording system failed. Proxy attendance and altered registers are referred through academic-integrity procedures.

3.2.2 Administrative procedure

The student identifies the course, session and discrepancy. The coordinator compares the class register, approved activity list and any system incident report. The resulting correction is dated and attributed. A refusal states what evidence was considered and how the student can request review.

3.2.3 Worked example

A scanner outage affects an entire tutorial group. The coordinator reconstructs that session using the signed backup register. The outage is not treated as a medical absence and does not consume a condonation request.

SECTION 03 / ATTENDANCE

3.3 Approved activities and attendance review

3.3.1 Governing provision

Representing the university at an approved event may justify alternative learning arrangements, but does not automatically convert absence into physical attendance. Departments must disclose how approved activities are treated before the event wherever practicable. Attendance and permission to be away are separate administrative decisions.

3.3.2 Administrative procedure

Before departure, the student obtains an activity approval and agrees any replacement practical work. The course coordinator records the applicable treatment and checks that essential learning outcomes remain achievable. At the end of teaching, unresolved attendance disputes are referred before the eligibility list is finalised.

3.3.3 Worked example

A sports representative receives permission to travel but misses a laboratory competency check. The department arranges an equivalent check if feasible; the travel letter alone cannot certify the competency.

SECTION 04 / ADD, DROP AND WITHDRAWAL

4.1 Adding a course

4.1.1 Governing provision

Adding a course changes the approved study plan and requires confirmation that the student can complete its assessments. Access to lecture notes is not sufficient where a missed practical or group allocation cannot reasonably be recovered. Published add dates apply equally to compulsory and elective courses unless the calendar states otherwise.

4.1.2 Administrative procedure

The student submits the requested course and reason. The receiving coordinator checks capacity and missed work; the advisor checks total load and progression. The registry confirms the change only when both reviews are complete and sends an updated registration notice. A late-add approval must now include a written recovery plan acknowledged by the student before registration is amended.

4.1.3 Worked example

A student seeks to add a design studio after teams have submitted their first project. The coordinator proposes an equivalent entry task, or gives a written academic reason why entry is no longer feasible.

SECTION 04 / ADD, DROP AND WITHDRAWAL

4.2 Dropping a course

4.2.1 Governing provision

A course dropped within the published drop period is removed from the semester enrolment record under the calendar rules. Dropping a prerequisite may affect later registration. A fee adjustment, scholarship consequence or residence consequence must be determined by the office responsible for that separate benefit.

4.2.2 Administrative procedure

Before submitting a drop request, the student discusses progression with an advisor. The request identifies the course and the intended alternative study plan. The registry confirms the effective date; students must not rely on simply ceasing attendance to remove a course.

4.2.3 Worked example

A student stops attending an elective but never submits a drop request. The course remains registered until a formal decision is made. The department explains the available withdrawal process instead of silently deleting the enrolment.

SECTION 04 / ADD, DROP AND WITHDRAWAL

4.3 Withdrawal after the drop period

4.3.1 Governing provision

Withdrawal records that a student left a registered course after the ordinary drop period. It does not certify that learning outcomes were met. A medical withdrawal may be considered on appropriate evidence without requiring unnecessary disclosure of diagnosis to teaching staff.

4.3.2 Administrative procedure

The student submits circumstances and supporting evidence to the designated registry officer. The department advises on academic consequences and possible alternatives. The decision states the transcript notation, credit effect and any separate fee referral. Retrospective requests require an explanation of why timely notice was not practicable.

4.3.3 Worked example

A prolonged hospital admission prevents completion of two courses. The reviewer considers withdrawal for those courses individually; a blanket semester cancellation is not assumed when the remaining courses can be completed.

SECTION 05 / INTERNAL ASSESSMENT

5.1 Assessment design and notice

5.1.1 Governing provision

Every course must publish its internal-assessment components, weightings and submission conditions before assessed work begins. Assessment must measure the approved learning outcomes. A change during the semester requires a documented reason and equitable arrangements for students who have already prepared or submitted work.

5.1.2 Administrative procedure

The coordinator checks that deadlines across components are practicable and identifies individual contributions in group work. Students receive a rubric or equivalent statement of criteria. The department retains the approved assessment plan and the notice of any authorised change.

5.1.3 Worked example

A planned field visit is cancelled by the host organisation. The replacement task assesses the same outcomes and carries the published weighting; it is not introduced as an unannounced extra component.

SECTION 05 / INTERNAL ASSESSMENT

5.2 Minimum internal marks

5.2.1 Governing provision

The internal assessment minimum is 24 marks out of 60. The approved internal-assessment total has increased in this edition. Attendance and examination conditions remain separate requirements. Earlier component scores must not be relabelled as scores on the new scale without an approved assessment mapping.

5.2.2 Administrative procedure

The coordinator reconciles component marks and publishes the provisional total with its denominator. Students may request a documented arithmetic or transcription check. The examination board approves any cohort transition mapping before it is applied; no officer may invent marks to establish eligibility.

5.2.3 Worked example

A student receives 23 marks from the approved components. That score is below the minimum. An evidenced correction of an omitted awarded mark can change the total, but an unsupported discretionary addition cannot.

SECTION 05 / INTERNAL ASSESSMENT

5.3 Feedback, moderation and missed work

5.3.1 Governing provision

Feedback should explain performance against the published criteria and identify opportunities for improvement. Moderation checks consistency across markers; it does not guarantee an upward change. A missed component is handled through the published special-consideration process, not an informal substitution agreed after results are known.

5.3.2 Administrative procedure

The department samples marked work across performance levels and records moderation outcomes. Students requesting special consideration provide the affected task and relevant circumstances. An approved replacement must assess equivalent outcomes and state its deadline, marking basis and effect on the original attempt. Provisional component feedback must be released within ten working days after the published submission deadline, unless an approved exception is announced.

5.3.3 Worked example

Two tutorial groups used different interpretations of a rubric. The moderator records the discrepancy and applies a consistent remedy to all affected scripts, including scripts whose students did not submit a complaint.

SECTION 06 / GRADING

6.1 Grade descriptors and credit

6.1.1 Governing provision

Grades describe demonstrated achievement against course outcomes. A grade descriptor must be interpreted with the approved assessment rubric, not as a promise that a fixed proportion of the class will receive each grade. Credit and grade-point calculations follow the published programme specification.

6.1.2 Administrative procedure

Before results are finalised, the department checks component totals, assessment decisions and any unresolved integrity case. The board of examiners approves the course result. The registry records the approved grade and identifies any temporary result code that prevents premature award decisions.

6.1.3 Worked example

An incomplete project is awaiting an authorised viva. The department uses the approved pending-result code rather than assigning a failing grade merely to close the mark-entry window.

SECTION 06 / GRADING

6.2 Rounding and result corrections

6.2.1 Governing provision

Intermediate calculations retain sufficient precision to avoid cumulative rounding error. Staff must use the rounding convention in the approved assessment scheme and must not apply a new convention only to selected borderline students. A corrected result requires an identifiable administrative or academic basis.

6.2.2 Administrative procedure

The marker submits raw component scores. The assessment system calculates the weighted total using the approved formula. Where an error is identified, the examiner documents the original calculation, corrected calculation and authorisation. The registry issues a revised result notice when a certified result changes.

6.2.3 Worked example

A spreadsheet rounds every task before adding the weighted scores. The department recalculates all affected records using the approved convention; it does not limit the correction to students nearest a grade boundary.

SECTION 06 / GRADING

6.3 Progression boards and standing

6.3.1 Governing provision

Academic standing reflects the programme progression rules and the confirmed record. A pending appeal, unresolved result or approved interruption must be visible to the progression board. An advisory warning supports planning and is distinct from a formal decision to suspend progression.

6.3.2 Administrative procedure

The board checks outstanding credits and prerequisites, records the reason for each adverse decision and identifies the next permitted study route. Students receive a notice describing conditions, advice contacts and the review route. Departments retain the evidence used by the board.

6.3.3 Worked example

A failed prerequisite prevents entry to one advanced course but not all semester study. The board specifies the restricted course and an alternative plan instead of issuing an unexplained general registration block.

SECTION 07 / END-SEMESTER EXAMINATIONS

7.1 Examination entry and identification

7.1.1 Governing provision

Late examination entry is permitted only up to 15 minutes after the examination starts. A late entrant receives no extra writing time. The invigilator records identity and arrival time against the published examination start. Candidates arriving after the limit use the missed-examination process.

7.1.2 Administrative procedure

Candidates check room assignments and bring the authorised identification. The chief invigilator uses the official start time rather than a candidate device clock. Admission remains subject to identity checks and preserving examination security; a transport delay does not automatically extend the limit.

7.1.3 Worked example

For an examination starting at 09:00, arrival at 09:15 is within the permitted interval. Arrival at 09:16 is outside it. An admitted late candidate still finishes at the scheduled time.

SECTION 07 / END-SEMESTER EXAMINATIONS

7.2 Permitted materials and conduct

7.2.1 Governing provision

Only materials authorised for the particular examination may be used. An open-book designation does not automatically permit messaging, generative tools or collaboration. Calculators and electronic aids must meet the course-specific notice. Invigilators explain any immediate room instruction without changing the assessed content.

7.2.2 Administrative procedure

Before writing begins, candidates store prohibited items as directed and check the paper title. Suspected misconduct is recorded with the relevant material and witness details. The invigilator preserves examination continuity where safe and refers the allegation for a fair academic-integrity process.

7.2.3 Worked example

A student brings annotated legislation to an examination permitting an unannotated statute book. The invigilator provides the authorised alternative if available and records the incident; guilt is not decided by a public confrontation in the room.

SECTION 07 / END-SEMESTER EXAMINATIONS

7.3 Disruption, illness and script custody

7.3.1 Governing provision

An examination disruption must be documented sufficiently to assess whether candidates lost a fair opportunity to demonstrate learning. Students who become unwell notify an invigilator before leaving where practicable. Script handling must preserve candidate identification and the chain of custody.

7.3.2 Administrative procedure

The chief invigilator logs the time, duration and affected candidates. Scripts are counted at collection and transfer, with discrepancies investigated immediately. The examinations office considers replacement arrangements or special consideration using the incident record rather than assuming every candidate was affected equally.

7.3.3 Worked example

A power failure interrupts one computer room while a second room continues normally. The report identifies the affected seats and the lost working time so that the remedy matches the actual disruption.

SECTION 08 / MEDICAL CONDONATION

8.1 Eligibility and approving authority

8.1.1 Governing provision

Medical condonation is available only where attendance is at least 80% and below 85%, and requires Academic Board approval. A Dean recommendation is required for referral but is not the final approval. Condonation addresses the attendance shortage only; internal marks, practical competencies and other academic conditions remain in force.

8.1.2 Administrative procedure

The student supplies the course attendance statement and focused medical evidence. The department checks session counts and missed essential work. The Dean records a recommendation, and the Academic Board records approval or refusal with reasons for each course covered.

8.1.3 Worked example

A student at 82% may be considered through this route with suitable evidence and the required approval. A student at 79% is outside this provision. An earlier Dean-only approval process must not be substituted for the authority specified in this edition.

SECTION 08 / MEDICAL CONDONATION

8.2 Evidence and confidentiality

8.2.1 Governing provision

Medical evidence should establish the period and educational impact of illness without circulating unnecessary clinical details. Staff must not demand an unrestricted medical history when a narrower statement can support the decision. Doubt about authenticity is referred through an authorised verification channel.

8.2.2 Administrative procedure

The receiving office stores medical material separately from routine class records and limits access to staff handling the request. Teaching staff receive the approved academic adjustment and relevant dates. Where evidence is incomplete, the reviewer specifies what clarification is needed and allows a reasonable opportunity to supply it.

8.2.3 Worked example

A certificate confirms treatment but not the period during which participation was affected. The reviewer requests a focused clarification instead of distributing the certificate to every course instructor.

SECTION 08 / MEDICAL CONDONATION

8.3 Decision, recording and review

8.3.1 Governing provision

A condonation decision must identify the courses covered and any conditions that remain outstanding. A letter granting permission to sit an examination does not retrospectively change the attendance register. Students may seek review where relevant evidence was overlooked or the procedure was not followed.

8.3.2 Administrative procedure

The registry records the decision against each affected course and communicates it before the eligibility list is used. The student receives reasons and the appeal route. If new evidence changes the basis of the decision, the competent authority issues a dated replacement decision that preserves the earlier record.

8.3.3 Worked example

One application names three courses but the evidence supports absence in only two. The decision addresses each course separately and explains why the third course has a different outcome.

SECTION 09 / SUPPLEMENTARY EXAMINATIONS

9.1 Eligibility for a supplementary attempt

9.1.1 Governing provision

A supplementary examination is available only where the programme rules permit another attempt. It is not a general option to replace a disappointing passing grade. An approved deferred first attempt must be distinguished from a supplementary attempt because their consequences may differ.

9.1.2 Administrative procedure

The examinations office identifies eligible courses from confirmed results and the approved attempt history. The student checks the entry notice and applicable assessment format. Any grade cap or fee must be disclosed through the relevant programme and finance rules before the student confirms entry.

9.1.3 Worked example

A student whose first examination was officially deferred is mistakenly listed as repeating a failed attempt. The registry corrects the attempt classification before the assessment board applies any repeat-attempt restriction.

SECTION 09 / SUPPLEMENTARY EXAMINATIONS

9.2 Syllabus and practical requirements

9.2.1 Governing provision

The department publishes the syllabus and assessment components applicable to the supplementary sitting. A discontinued course must have a teach-out or equivalent assessment arrangement. Passing a written supplementary paper cannot substitute for an essential practical outcome that has not been demonstrated.

9.2.2 Administrative procedure

The coordinator identifies which existing component marks remain valid and which must be reassessed. Students receive preparation guidance and access to the relevant course materials. A change of assessment format requires an equivalence check and clear notice to the affected cohort. The supplementary assessment notice must be available at least ten working days before the sitting.

9.2.3 Worked example

A laboratory course changes its software platform after the main sitting. The supplementary assessment either supports the original platform or provides an equivalent preparation opportunity before requiring the replacement tool.

SECTION 09 / SUPPLEMENTARY EXAMINATIONS

9.3 Results and subsequent registration

9.3.1 Governing provision

Supplementary results must reach the progression process in time to inform the next registration decision where practicable. A student awaiting a result may receive conditional planning advice, but conditional advice must state what happens if the prerequisite is not passed.

9.3.2 Administrative procedure

The board confirms supplementary results and the registry updates the attempt history. Advisors check whether a revised study plan is needed. If a late result changes eligibility after registration begins, the department records a fair adjustment that considers work already undertaken.

9.3.3 Worked example

A supplementary prerequisite result is released after the add window. A successful student is offered an appropriate registration correction rather than refused entry solely because the institution released the result late.

SECTION 10 / ACADEMIC INTEGRITY

10.1 Attribution, collaboration and tools

10.1.1 Governing provision

Submitted work must accurately represent the student contribution. Sources, reused work and permitted assistance must be acknowledged in the form required by the task. Collaboration is allowed only to the extent stated in the assessment instructions. Tool availability does not establish permission to use it.

10.1.2 Administrative procedure

The coordinator explains acceptable collaboration and digital assistance before submission. Students retain drafts and records of substantial assistance where required. If an instruction is unclear, the student seeks clarification before relying on a tool to produce assessed content. Where a task permits generative assistance, the submission must now include a short declaration identifying the tool and the nature of its use.

10.1.3 Worked example

A group may discuss an approach but must submit individual analyses. Copying the group discussion verbatim into each individual report without acknowledgement exceeds the permission to discuss ideas.

SECTION 10 / ACADEMIC INTEGRITY

10.2 Allegations and evidence handling

10.2.1 Governing provision

An integrity allegation requires specific evidence and a fair opportunity to respond. A similarity score or automated detector output is an indicator for review, not a finding of misconduct. Investigators consider the task conditions, student explanation and underlying material.

10.2.2 Administrative procedure

The case officer describes the alleged conduct, supplies the evidence that can fairly be disclosed and invites a response. Relevant drafts, source comparisons and interview notes are retained. Conflicted staff do not determine the allegation. A support person may assist under the hearing procedure.

10.2.3 Worked example

A detector flags a fluent paragraph written by a multilingual student. The investigator examines drafts and sources rather than treating writing style as proof that the work was not the student own.

SECTION 10 / ACADEMIC INTEGRITY

10.3 Findings and educational remedies

10.3.1 Governing provision

A finding must distinguish poor academic practice from established misconduct and explain the evidence supporting that distinction. Any consequence must be authorised by the applicable regulations and proportionate to the findings. The result notice identifies how an appeal may be made.

10.3.2 Administrative procedure

The panel records the allegation, response, finding and reasons. The assessment office implements only the authorised academic consequence. Educational support may accompany a consequence, but does not replace the obligation to communicate the decision and maintain an accurate record.

10.3.3 Worked example

A citation error is corrected through an authorised educational remedy after review. The department does not also record an undisclosed misconduct penalty in a separate spreadsheet used for future scholarship decisions.

SECTION 11 / PROJECTS AND DISSERTATIONS

11.1 Proposal and supervision agreement

11.1.1 Governing provision

A project proposal must define an achievable question, method, deliverables and supervision arrangement. Access to data, equipment or a partner site must be realistic before the project is approved. Ethical approval is required before activities that fall within the university review framework begin.

11.1.2 Administrative procedure

The student and supervisor agree milestones and meeting expectations. The department confirms the assessment criteria and an alternative contact if the supervisor becomes unavailable. Significant changes in scope are recorded so that the final assessment uses the approved project expectations.

11.1.3 Worked example

A proposed survey expands to include sensitive personal experiences. The student pauses recruitment and obtains the required review instead of assuming that the original low-risk proposal covers the expanded work.

SECTION 11 / PROJECTS AND DISSERTATIONS

11.2 Progress reviews and project changes

11.2.1 Governing provision

Progress reviews identify barriers early and document academic advice. A delayed supplier or withdrawn partner may justify a revised method, but does not automatically reduce the learning outcomes. Students must not fabricate observations to fill a gap created by lost access.

11.2.2 Administrative procedure

At each agreed milestone, the student submits evidence of progress and unresolved risks. The supervisor records recommendations and, where necessary, refers a scope change to the project coordinator. The revised plan specifies what will be assessed and how existing work contributes. Projects lasting a full semester now require a recorded midpoint review by a second academic reader.

11.2.3 Worked example

A sensor shipment fails to arrive. The coordinator approves a validated simulation study with a revised evaluation plan; the report explicitly distinguishes simulated data from measurements that were never collected.

SECTION 11 / PROJECTS AND DISSERTATIONS

11.3 Submission, examination and ownership

11.3.1 Governing provision

A project submission must identify individual contributions, external assistance and any restrictions on dissemination. A confidentiality agreement cannot prevent authorised examiners from accessing material needed for assessment. Intellectual-property questions are resolved through the approved agreement rather than assumed from supervision alone.

11.3.2 Administrative procedure

Before submission, the student checks the required files and declaration. Examiners apply the published criteria and record moderation or viva outcomes. An embargo request identifies the protected material and duration; the registry keeps an accessible assessment copy under the agreed restrictions.

11.3.3 Worked example

An industry partner asks that an entire report be withheld indefinitely. The department arranges confidential examination and considers a limited embargo instead of accepting a condition that makes academic assessment impossible.

SECTION 12 / INTERNSHIPS AND PLACEMENTS

12.1 Placement approval and suitability

12.1.1 Governing provision

A credit-bearing placement must provide supervised learning aligned with the course outcomes. A job offer is not automatically an approved placement. The university checks role suitability, supervision, safety arrangements and any conflict between workplace duties and academic assessment.

12.1.2 Administrative procedure

The student submits the host details and proposed duties before starting. The placement coordinator agrees learning objectives and a contact schedule with the host. Where a placement is unpaid, students receive clear information about expected costs and available support before accepting. Approval now requires a named university escalation contact as well as the host supervisor.

12.1.3 Worked example

A host offers routine filing duties for an engineering placement. The coordinator seeks substantive technical responsibilities or declines credit approval; the employer name alone does not demonstrate suitable learning.

SECTION 12 / INTERNSHIPS AND PLACEMENTS

12.2 Conduct, safety and interrupted placements

12.2.1 Governing provision

Students follow reasonable host procedures while retaining access to university support and complaint channels. Unsafe duties or harassment must be reported through the placement contact. Leaving an immediate danger takes precedence over obtaining routine academic permission to change a placement.

12.2.2 Administrative procedure

The coordinator records the reported concern and agrees interim arrangements. Where the placement ends early, the department assesses completed learning and considers an alternative opportunity. Host feedback is weighed with the student evidence rather than accepted as the sole account of a dispute.

12.2.3 Worked example

A student is instructed to operate equipment without required training. The coordinator supports withdrawal from that task and arranges a safety review; the refusal is not automatically recorded as poor professional commitment.

SECTION 12 / INTERNSHIPS AND PLACEMENTS

12.3 Placement assessment and credit

12.3.1 Governing provision

Placement credit requires evidence of learning, not merely a certificate of attendance at the workplace. Confidential commercial material must be handled through an approved assessment arrangement. Host ratings inform assessment but do not replace the university responsibility for academic judgment.

12.3.2 Administrative procedure

The student submits a reflective account and agreed evidence of work. The academic assessor checks outcomes, contribution and the supervisor report. Where host confidentiality limits evidence, the coordinator arranges a redacted portfolio or confidential discussion before the submission deadline.

12.3.3 Worked example

A host prohibits release of client names. The student uses anonymised examples and a supervisor confirmation that verifies the work without disclosing protected client information.

SECTION 13 / LIBRARY AND LEARNING RESOURCES

13.1 Borrowing entitlements

13.1.1 Governing provision

Undergraduate students may borrow 6 books for 28 days, with a maximum of 1 renewal. A reservation or recall can prevent renewal. Reference-only items and short-loan collections retain their displayed restrictions. The revised ordinary entitlement applies to loans issued from this edition effective date.

13.1.2 Administrative procedure

The library issue record states the due date and remaining renewal entitlement. A renewal takes effect only after confirmation. Loans issued under an earlier edition retain their original due dates unless the library issues an explicit revised notice.

13.1.3 Worked example

A student has already renewed an ordinary loan once. The revised entitlement does not permit another renewal, even though the initial loan period is longer. The borrower returns the item and follows any reservation queue.

SECTION 13 / LIBRARY AND LEARNING RESOURCES

13.2 Reservations, recalls and lost items

13.2.1 Governing provision

A reservation places a borrower in the published queue; it does not guarantee immediate access. A recall changes the return obligation only through an authorised notice. Loss or damage is assessed through the library procedure, with an opportunity to explain a disputed record.

13.2.2 Administrative procedure

Library staff send a collection or recall notice through the registered contact channel. Students report missing items promptly and receive instructions for replacement or review. Any replacement charge is determined by the library schedule; students should not purchase a substitute edition without approval.

13.2.3 Worked example

A borrower returns a book that the system still marks as outstanding. Staff check return-bin processing and shelf records before imposing a charge or blocking further borrowing.

SECTION 13 / LIBRARY AND LEARNING RESOURCES

13.3 Digital access and study spaces

13.3.1 Governing provision

Licensed resources are provided for authorised learning and research. Sharing login credentials or systematic downloading beyond licence terms may lead to restricted access after review. Quiet-study and group-study areas have different permitted uses, which must be displayed clearly.

13.3.2 Administrative procedure

Users report access faults to the library desk with the resource title and error details, without sending passwords. Accessibility needs are considered through the appropriate service. Staff resolve competing room bookings against the confirmed booking record and the published space rules.

13.3.3 Worked example

A group books a discussion room but finds another class using it informally. Library staff resolve the conflict using the booking record; a student is not required to confront the other group alone.

SECTION 14 / HOSTEL AND RESIDENTIAL RULES

14.1 Allocation and residence agreement

14.1.1 Governing provision

Residence allocation is separate from academic admission and does not guarantee a particular room. The residence agreement identifies the term, charges, facilities and cancellation conditions. Accessibility and welfare needs are considered through the designated support process with appropriate confidentiality.

14.1.2 Administrative procedure

Before arrival, the student confirms acceptance and reviews the inventory procedure. At check-in, staff and resident record the room condition and any existing damage. Room changes require approval so that occupancy records remain accurate for safety and emergency contact purposes.

14.1.3 Worked example

A resident discovers a damaged desk on arrival. Reporting it during the inventory review distinguishes pre-existing damage from a later charge and allows maintenance to schedule a repair.

SECTION 14 / HOSTEL AND RESIDENTIAL RULES

14.2 Visitors and overnight stays

14.2.1 Governing provision

Hostel visitors must depart by 19:00. Overnight stays require separate written approval and are not authorised by an ordinary visitor entry. Approved academic events do not automatically extend ordinary residential visiting hours.

14.2.2 Administrative procedure

Visitors register through the residence access process and name their host. The host explains permitted areas and the departure requirement. Any exception must be recorded by the residence officer with its duration, reason and authorised area; a student host cannot grant an extension.

14.2.3 Worked example

An evening presentation ends shortly before the departure time. A visitor wishing to remain in a hostel lounge afterward needs the applicable written permission. Attendance at the presentation is not an overnight or extended-visit approval.

SECTION 14 / HOSTEL AND RESIDENTIAL RULES

14.3 Residential welfare and shared facilities

14.3.1 Governing provision

Residents must use kitchens, electrical equipment and shared facilities according to posted safety instructions. A welfare concern should be referred promptly and discreetly. Noise or shared-space disputes are addressed through the residence process rather than retaliatory interference with another resident belongings.

14.3.2 Administrative procedure

The residence team records maintenance and welfare reports separately. Urgent hazards are escalated immediately; routine repairs receive a tracking reference. A room inspection follows the agreement and respects privacy except where emergency access is necessary to protect life or prevent serious damage.

14.3.3 Worked example

Water leaks into a room during the night. Staff arrange emergency access and a safe temporary location, then document the reason for entry and the property affected rather than treating it as a routine inspection.

SECTION 15 / STUDENT LEAVE AND INTERRUPTION

15.1 Short leave and notification

15.1.1 Governing provision

Permission for short leave records an authorised absence from university activity. It does not by itself satisfy attendance, assessment or residence conditions. Students should notify the relevant offices as early as practicable, while emergency circumstances may justify notification after the immediate event.

15.1.2 Administrative procedure

The request identifies dates, affected teaching or assessments and contact arrangements. The advisor explains which separate decisions may be needed. Approved leave is communicated only to staff who need the information to arrange learning, assessment or welfare support.

15.1.3 Worked example

A family emergency requires travel during a presentation week. The leave approval supports the absence, but the course coordinator must separately confirm an alternative assessment arrangement.

SECTION 15 / STUDENT LEAVE AND INTERRUPTION

15.2 Interruption of studies

15.2.1 Governing provision

An interruption temporarily pauses the approved programme of study. The decision must state its effective period and any conditions for return. Students receive advice on progression, funding, access to facilities and any external reporting obligations relevant to their circumstances.

15.2.2 Administrative procedure

The student discusses the proposed interruption with an advisor and submits the registry request. The department records completed learning and outstanding requirements. The registry confirms the approved dates and directs questions about scholarships or residence to the responsible office.

15.2.3 Worked example

A student interrupts after completing one module but before finishing another. The decision preserves the confirmed credit and explains the status of the unfinished module rather than treating the entire record as void.

SECTION 15 / STUDENT LEAVE AND INTERRUPTION

15.3 Return after interruption

15.3.1 Governing provision

Return to study requires a feasible course plan and completion of any conditions stated in the interruption decision. A curriculum change during absence must be addressed through equivalence or teach-out arrangements. A support plan should be proportionate to the student current needs.

15.3.2 Administrative procedure

Before the intended return, the advisor checks course availability and unresolved requirements. The registry confirms reactivation and the department provides an updated timetable. Medical information is requested only where relevant to an identified return condition or reasonable support arrangement. The department provides a written return study plan before reactivated registration is confirmed.

15.3.3 Worked example

A compulsory course has been replaced during a student absence. The programme board identifies the replacement and any bridging material, ensuring that the student is not required to repeat already completed equivalent learning.

SECTION 16 / SCHOLARSHIPS AND FINANCIAL SUPPORT

16.1 Award conditions and selection

16.1.1 Governing provision

Scholarship eligibility and selection criteria must be published for the particular award. Academic merit, financial need and other conditions are assessed using the evidence specified by the scheme. An offer of admission is not a scholarship offer unless the award is explicitly included.

16.1.2 Administrative procedure

The scholarships office checks applications against the published criteria and records conflicts of interest. Applicants receive an award or outcome notice through the authorised channel. A conditional offer states the evidence still needed and the date by which acceptance must be confirmed.

16.1.3 Worked example

A donor prefers a particular applicant after the published process closes. The selection panel applies the approved criteria and conflict rules rather than allowing an informal preference to replace the recorded assessment.

SECTION 16 / SCHOLARSHIPS AND FINANCIAL SUPPORT

16.2 Renewal, suspension and changes

16.2.1 Governing provision

Continuing support depends on the conditions in the individual award notice. A change in course load, interruption or progression status may affect payment, but the effect must be determined under that scheme. Students must receive notice of a proposed adverse decision and a review route.

16.2.2 Administrative procedure

The office checks confirmed results and relevant enrolment changes at the scheme review point. Where information is incomplete, it seeks clarification before assuming a condition has failed. Students report material changes and receive a written explanation of any revised entitlement. An adverse renewal notice now allows ten working days for a student to request review before the proposed suspension takes effect.

16.2.3 Worked example

A pending examination result makes renewal appear ineligible. The office distinguishes a pending record from a confirmed failure and records an interim payment decision under the award conditions.

SECTION 16 / SCHOLARSHIPS AND FINANCIAL SUPPORT

16.3 Fees, refunds and hardship support

16.3.1 Governing provision

Fee liabilities and refund dates are governed by the published fee schedule and enrolment events. Academic approval to withdraw does not itself determine a refund. Hardship support considers immediate need under its own criteria and should not be represented as cancellation of an existing fee liability.

16.3.2 Administrative procedure

Students submit a fee query with the relevant enrolment decision and payment reference. Finance reconciles the account and explains the calculation. Sensitive financial evidence for hardship support is handled by the designated office, with teaching staff receiving only information needed for an academic arrangement.

16.3.3 Worked example

A student receives a withdrawal approval and assumes all tuition is refunded. Finance applies the published refund schedule and explains any remaining balance, while separately directing the student to hardship advice.

SECTION 17 / STUDENT RECORDS

17.1 Accuracy and identity details

17.1.1 Governing provision

The registry maintains the authoritative academic record. Students should keep contact details current and request correction of inaccurate identity information with suitable evidence. A preferred name used in teaching systems and a legal name required for a formal certificate may be recorded differently.

17.1.2 Administrative procedure

The student identifies the field requiring correction and supplies the evidence requested for that field. Registry staff confirm the change and identify downstream systems that need updating. Access to identity documents is limited to staff handling the correction.

17.1.3 Worked example

A student changes their legal surname before graduation. The registry updates the award record using the approved evidence and checks the certificate proof, rather than relying on an informal email to a course tutor.

SECTION 17 / STUDENT RECORDS

17.2 Transcripts and disclosure

17.2.1 Governing provision

A transcript reports the certified academic record and applicable result codes. Requests from third parties require an authorised basis for disclosure. Staff must not reveal a student result merely because the requester knows the student number or claims to be a family member.

17.2.2 Administrative procedure

The registry verifies the request, recipient and scope before issuing a transcript or confirmation. Students can inspect their record and request investigation of a discrepancy. Where a result is under formal review, the record uses the approved notation without implying that the appeal has already succeeded. Electronic transcript verification links expire after thirty calendar days; a fresh link requires a new authorised issue.

17.2.3 Worked example

An employer phones a lecturer to confirm a candidate grades. The lecturer refers the request to the registry verification process instead of reading marks from a personal spreadsheet.

SECTION 17 / STUDENT RECORDS

17.3 Retention and record corrections

17.3.1 Governing provision

Academic decisions must remain traceable after staff changes or system migration. A correction replaces an inaccurate operative record while preserving an appropriate history of the change. Sensitive supporting material is retained and disposed of according to the approved records schedule.

17.3.2 Administrative procedure

The record custodian identifies the decision, authority and evidence supporting a correction. The corrected notice is linked to the earlier notice and relevant recipients are informed. Routine working copies are managed separately from the authoritative record to avoid conflicting versions.

17.3.3 Worked example

A result is corrected after an appeal. The registry updates the transcript and preserves the decision trail; it does not leave two conflicting final results in separate systems without identifying which is operative.

SECTION 18 / APPEALS AND COMPLAINTS

18.1 Grounds and appropriate routes

18.1.1 Governing provision

An academic appeal challenges a decision on grounds permitted by the relevant procedure, such as a material procedural error or relevant evidence not reasonably available earlier. Disagreement with academic judgment alone is not automatically an appeal ground. A service complaint may require a different route.

18.1.2 Administrative procedure

The student identifies the decision, desired remedy and supporting grounds. The receiving office checks jurisdiction and explains any missing information. Where a submission belongs elsewhere, staff refer it with the student knowledge rather than allowing it to disappear between offices.

18.1.3 Worked example

A student disputes an arithmetic error in a mark and also complains about delayed feedback. The mark-check route addresses the calculation; the service complaint addresses the delay without confusing the two remedies.

SECTION 18 / APPEALS AND COMPLAINTS

18.2 Review process and interim arrangements

18.2.1 Governing provision

Appeals are considered by officers or panels who can act impartially. The student receives the material necessary for a fair response, subject to justified confidentiality restrictions. Interim arrangements should preserve options without implying that the original decision has already been overturned.

18.2.2 Administrative procedure

The case officer acknowledges the appeal, identifies the applicable timetable and checks conflicts. The reviewer considers the record and response, requesting focused clarification where necessary. Any interim registration or assessment permission states its conditions and what happens when the appeal is decided. The receiving office acknowledges a complete appeal within three working days and identifies the next review stage.

18.2.3 Worked example

A progression appeal remains unresolved when teaching begins. Conditional attendance may preserve the student opportunity to study, but the notice explains that credit registration depends on the final decision.

SECTION 18 / APPEALS AND COMPLAINTS

18.3 Outcomes and implementation

18.3.1 Governing provision

An appeal outcome must state the decision, reasons and any authorised remedy. A successful appeal may require reconsideration rather than a predetermined mark or award. The office responsible for implementation confirms what record or opportunity changes and when the change takes effect.

18.3.2 Administrative procedure

The panel issues a dated decision to the student and relevant implementing office. The registry checks that the remedy has been completed and records any further review route. Monitoring of recurring procedural problems should use anonymised information where individual details are unnecessary.

18.3.3 Worked example

A panel finds that relevant evidence was not considered. It refers the case to a fresh decision-maker with instructions to consider that evidence, rather than automatically awarding the result requested by the appellant.

SECTION 19 / DISCIPLINE AND COMMUNITY CONDUCT

19.1 Conduct standards and reporting

19.1.1 Governing provision

Students must respect the safety, dignity and lawful access of others in university activities. Reports of harassment, violence, property interference or serious disruption are handled through the relevant conduct procedure. A report is an allegation to be assessed, not a public finding of guilt.

19.1.2 Administrative procedure

The receiving officer records the concern, immediate support needs and available evidence. Urgent safety measures are considered separately from the final disciplinary decision. Staff explain confidentiality limits and avoid promises that would prevent a fair process or necessary protective action.

19.1.3 Worked example

A student reports threatening messages in a course group. The university preserves the messages and considers protective contact arrangements while giving the responding student a fair opportunity to address the allegation.

SECTION 19 / DISCIPLINE AND COMMUNITY CONDUCT

19.2 Hearings and proportionate measures

19.2.1 Governing provision

Disciplinary decisions require an identified rule, reliable evidence and an opportunity to respond. Interim restrictions protect safety or the process and must not be presented as a final sanction. Any restriction should be proportionate and reviewed when circumstances change.

19.2.2 Administrative procedure

The case officer gives notice of the allegation and hearing arrangements. The panel considers the response, records findings and applies only authorised measures. The decision notice explains reasons, duration, conditions and the appeal route. Support arrangements are available to affected participants. Interim restrictions must be reviewed at least every ten working days while the investigation remains unresolved.

19.2.3 Worked example

Access to one laboratory is temporarily restricted during a safety investigation. The university considers alternative study arrangements and reviews the restriction rather than treating it as an automatic suspension from every academic activity.

SECTION 19 / DISCIPLINE AND COMMUNITY CONDUCT

19.3 Restoration and return to community

19.3.1 Governing provision

Completion of a disciplinary measure does not remove the need for a workable return arrangement. A support plan is distinct from an additional sanction. Confidential disciplinary information is shared only where necessary to implement an authorised measure or protect a legitimate safety interest.

19.3.2 Administrative procedure

The responsible officer checks completion conditions and agrees relevant contacts for return. Departments receive the operational information they need without an unnecessary narrative of the case. Any continuing restriction must have a stated authority and review point.

19.3.3 Worked example

A student returns after a period of exclusion with an approved mentoring plan. Staff do not describe voluntary support meetings as a new penalty or disclose the disciplinary history to classmates.

SECTION 20 / EMERGENCY PROCEDURES AND AMENDMENTS

20.1 Immediate emergency response

20.1.1 Governing provision

In an immediate threat to life or serious injury, contact the local emergency services and campus security using the current campus emergency directory. Follow safe evacuation instructions and do not re-enter a restricted building until authorised. Academic deadlines do not take precedence over immediate safety.

20.1.2 Administrative procedure

Move away from danger where safe, alert others without putting yourself at risk and provide the location and nature of the emergency. The incident controller coordinates the response. Once safe, students notify the department of affected assessments so that academic consequences can be reviewed.

20.1.3 Worked example

A fire alarm sounds during an examination. Candidates evacuate as directed rather than remaining to finish answers. The examinations office later uses the incident record to determine a fair academic arrangement.

SECTION 20 / EMERGENCY PROCEDURES AND AMENDMENTS

20.2 Continuity after disruption

20.2.1 Governing provision

A campus closure or major system outage may require temporary changes to teaching and assessment. Changes must preserve learning outcomes, accessibility and a fair opportunity to participate. Staff should distinguish confirmed arrangements from provisional plans while an incident is still developing.

20.2.2 Administrative procedure

The university issues a dated continuity notice through the official channel. Departments identify affected courses and communicate replacement dates or formats. Students unable to use the replacement arrangement can request consideration with relevant circumstances. The registry preserves the notices used for later decisions. During a prolonged campus closure, a dated continuity update must be issued each working day, including when the confirmed arrangements have not changed.

20.2.3 Worked example

A prolonged network outage prevents submission through the learning platform. The department provides an authorised alternative and revised deadline; it does not require proof of individual fault when the institution outage is documented.

SECTION 20 / EMERGENCY PROCEDURES AND AMENDMENTS

20.3 Amendments, effective dates and transition

20.3.1 Governing provision

Academic Council approves substantive amendments. This edition applies to students entering taught undergraduate programmes from 1 August 2027. Continuing students retain their previously applicable academic eligibility rules unless an approved transition expressly includes them. Library loans newly issued and residence visits occurring from the effective date use the revised service rules for all users.

20.3.2 Administrative procedure

Before advising a student, the Registrar identifies the admission cohort and distinguishes academic eligibility from a service-use rule. Departments publish any approved transition mapping for assessment components. Superseded documents remain available with their dates, and earlier decisions are not silently overwritten.

20.3.3 Worked example

A continuing student uses the earlier academic attendance scheme while borrowing a new library book after the effective date. The new loan entitlement applies to that loan, but it does not itself move the student onto the revised academic assessment scheme.

APPENDIX A

Definitions and decision language

Use these definitions when reading an operative rule. A defined term does not create an exception to a requirement stated elsewhere.

Academic day	A day designated for academic business in the published university calendar; it is not necessarily a teaching day for every course.
Working day	A day on which the responsible administrative office is open for ordinary business. A published closure is excluded.
Eligible session	A delivered teaching session included in the approved attendance calculation for that course.
Approval	A recorded decision by the officer or body with authority to grant the specified permission.
Pending result	A temporary record used while an authorised assessment or decision remains unresolved.
Certified result	A result confirmed through the authorised examination-board and registry process.

A message saying that a request is received is an acknowledgement, not an approval. Students should retain the final decision notice and check that it names the relevant course and period.

APPENDIX B

Semester process map

The academic calendar supplies actual dates. This process map explains dependencies; it must not be read as replacing the dates published for a particular semester.

Before registration	Publish course offerings, prerequisite information, assessment outlines and advisor arrangements.
Registration window	Confirm the study plan; identify holds and provisional entries that still need a decision.
Early teaching	Reconcile class lists and formal registration; resolve add or drop requests through the registry.
During teaching	Record attendance, provide assessment feedback and review approved interruptions or adjustments.
Before examinations	Reconcile internal marks and attendance; communicate outstanding eligibility decisions.
After results	Complete progression review, supplementary entry and any authorised result corrections.

Example: a corrected registration record must reach the examination list before candidates are assigned papers. Completing a form after that list is prepared requires an explicit reconciliation, not an assumption that all systems update instantly.

APPENDIX C

Request and decision record

A clear administrative record should enable another authorised officer to understand what was requested, what evidence was considered and what decision governs.

Request identifier	Use a unique reference and link related requests without merging distinct decisions.
Student and course	Record the student identifier, course code, programme and applicable edition.
Circumstances	Describe the relevant dates and educational effect without unnecessary sensitive detail.
Evidence inventory	List the documents received and any clarification requested; identify the source of each item.
Decision and authority	Record the outcome, decision-maker, authority, conditions and effective period.
Notice and review	Record when the student was notified and the route for correcting or reviewing the decision.

Example: a medical-leave request and an assessment replacement may share evidence but need different decisions. Link the records so staff can follow the evidence while preserving the distinction between permission to be absent and permission to take another assessment.

APPENDIX D

Assessment incident report

Use this schedule for examination disruption, missing scripts or a significant assessment-system fault. The report supports a later decision; it does not prescribe a mark adjustment.

Timing	Record the published start, actual interruption, restoration and finishing times.
Affected group	Identify rooms, seats, courses or submissions affected; avoid assuming a campus-wide impact.
Observed event	Separate direct observations from information reported by another person.
Immediate response	Describe instructions, alternative arrangements and any safety action.
Evidence preserved	List logs, attendance sheets, script counts and other material held by the office.
Academic referral	Identify the examinations office or board responsible for deciding the academic remedy.

Example: when one upload server fails, preserve its incident log and the alternative submission instructions. The board can then distinguish a platform failure from a separate late submission that occurred after normal service resumed.

APPENDIX E

Confidential evidence handling

The following handling rules support the academic procedures without expanding access to sensitive information. The approved university records schedule governs retention periods.

Medical material	Restrict access to the reviewing office; communicate the authorised adjustment to teaching staff.
Financial evidence	Route hardship documents to the designated support office, not a shared course folder.
Integrity case material	Preserve source comparisons and responses; provide fair disclosure through the case officer.
Placement information	Redact client identifiers unless authorised examiners need confidential access.
Identity documents	Use the registry correction channel and avoid unnecessary duplicate copies.
Decision notices	Keep the operative notice linked to its authority, evidence record and any replacement decision.

Example: an advisor may need to know that an extension was approved, but not the underlying diagnosis. Sharing the outcome supports teaching while a restricted evidence record supports accountability.

APPENDIX F

Administrative boundary examples

These examples illustrate distinctions that commonly lead to errors. They do not introduce additional eligibility thresholds or override the substantive sections.

Permission and eligibility	Approved leave explains an absence; it does not automatically satisfy a course attendance condition.
Credit and participation	Participating in teaching does not award credit without achievement of the assessed outcomes.
Correction and discretion	Fixing a transcription error restores the evidence-based mark; adding unsupported marks changes it without a basis.
Deferral and repetition	An authorised deferred first attempt must not be silently classified as a failed repeat attempt.
Support and sanction	A return-to-study support arrangement is not an additional disciplinary penalty.
Notice and amendment	A changed web page must be traced to an approved amendment and its cohort provisions.

For a disputed case, identify the distinction first, then find the operative section and the authority responsible. Similar wording in an unrelated procedure is not sufficient evidence for transferring an exception from one process to another.

APPENDIX G

Finding the responsible office

Use this directory to route a request. Current staff names, office hours and emergency telephone numbers are maintained in the university service directory, not fixed in this handbook.

Registry	Registration, certified records, interruption dates, result corrections and edition control.
Course coordinator	Attendance reconciliation, component marks, task instructions and approved learning arrangements.
Dean / Academic Board	Dean recommendation and Academic Board final approval for medical condonation under section 8.
Examinations office	Examination entry, incident reports, script custody and supplementary administration.
Library and residence	Loan disputes and study spaces; separately, residential access and visitor approvals.
Student support	Welfare referrals, accessibility coordination and navigation of available support services.

Example: a student who misses an examination because of a residence emergency may need both a residence incident record and an examinations decision. The first office should help route the request rather than implying that its own report grants an assessment remedy.

APPENDIX H

Edition register and citation practice

This handbook is the 2027.1 edition, effective 1 August 2027 for the 2027-28 academic year, subject to programme-specific approved transition notices. Its fictional institution and examples are provided for manual software testing.

Document identifier	AU-ARH-2027.1. Cite the identifier and physical PDF page when recording evidence.
Approval record	Academic Council reference AC/2027/04, simulated approval dated 15 June 2027.
Custodian	Office of the Registrar, responsible for the controlled edition and amendment notices.
Page convention	Printed page numbers equal physical PDF page numbers, including cover and contents.
Citation method	Identify the numbered subsection and quote the shortest complete operative phrase needed.
Amendment control	Keep the original edition and the dated amendment together when a later change applies.

Example: a caseworker cites the relevant subsection, edition and page instead of writing only handbook says so. This makes it possible to distinguish a source requirement from an interpretation, an example or a later amendment. This edition ends here; there are no omitted schedules.
